

NSUEAA Webinar on Writing a Research

The **North South University Economics Alumni Association (NSUEAA)** organized a webinar for its Career Pathway Seminar Series on 18 September 2020, on behalf of the **Department of Economics**. This time NSUEAA had the great pleasure of hosting Dr. Sakib Mahmud, the founding president of the **Young Economists Forum (YEF)** in 1998. Dr. Mahmud is currently an Associate Professor of Sustainable Management and Economics at the School of Business and Economics, University of Wisconsin- Superior. The title of his talk was ‘Guidelines for Writing an Effective Research Paper in Top Economics Journals’.

The webinar was a successful event in bringing the current students and an alumnus closer under one platform. About sixty students participated in the webinar. It was an interactive session providing students with useful tips on writing and research, and motivating them in adopting collaborative research approach with foreign students. The session offered a great platform for the current students to take full advantage of learning on the topic.

The Career Pathway Seminar Series helps students to develop interests in potential career opportunities while they gain great networking leads. This time the webinar aimed to facilitate the participants of ‘EconFest’ as well for an essay writing competition, to be held in mid-October organized by the Young Economists Forum (YEF). Students of NSU and other universities will participate in the competition. The Career Pathway webinar provided a good occasion for the participants to learn about writing a research.

and sometimes it is not possible to accumulate those data 1st hand, so, how can we fill up those data vacuums or gaps in writing a research paper? thank you.

Mursalin Hasan Chowdhury Afri 1812196630
7:36 PM
Thanks for paving the way for us, sir!

Khan Sharab Anan Bapon 1911562030 7:37 PM
Sir, given that the world is changing at a phenomenal pace, should we focus on the most pressing issues or try to provide information of the past for future generations?

Ishtiaque Ahmed 2016154053 7:52 PM
I am a graduate student in the department of Economics. I obtained my undergraduate degree in Computer Science and Engineering where my major was in Artificial Intelligence and Machine Learning. What should be my pathway if I want to work in some intersecting area of these two fields? What should be the paradigm of problems that I can address both as a researcher and a professional?
